

About Datakata

Established in 2016 as a sole proprietorship, Datakata initially operated as a data analytics consultancy dedicated to transforming clients' raw data into actionable insights. Incorporating as an LLC in 2019, Datakata has evolved into a Huntsville-based NASA contractor with experience in data analysis, on-premises solution development, machine learning, and natural language processing (NLP).

With 24+ months of past performance with NASA, via a sole source prime award #80NSSC21P0840, Datakata is an agile lean startup laser-focused on applying novel approaches to NLP and knowledge management systems since 2019.

Core Capabilities

- **AI-powered Semantic Analysis for Critical Document Review.**
- **Generative** natural language processing (NLP): information retrieval, knowledge representation, automated reasoning, and machine learning technologies applied to document review of large projects.
- **Data Tagging:** process automation on large data files in the terabyte range.
- **Intelligent Agent Systems:** software entities that carry out operations on behalf of a user with a degree of independence or autonomy.

The Datakata Difference

- **Novel** approach: Datakata's state-of-the-art Contradiction Detection technology leverages natural language generation to find, and explain, errors and redundancies in written text.
- **Agile Small Company Culture:** Datakata works closely with our clients to understand their needs and deliver tailored solutions.
- **On premises and on-site** cloud agnostic, deployment-focused solutions.
